

BATTERIES

American Batteries type Absorbed Glass Mat AGM.

The electrolyte is absorbed and immobilized in this fiber mat.

This advanced and patented technology was developed to achieve the maximum safety, efficiency and durability that previous technologies offered.

This type of construction perform a very low resistance which provides higher amperages and lower self-discharge compared to liquid acid batteries, gel, and other AGM batteries.

FEATURES

Completely maintenance free

Unlimited acceptance of charge current (which facilitates fast charging)

The batteries work in a wide range of temperatures: from -40°C to 72°C

Very efficient charge (2% loss versus 16% gel or 26% liquid acid)

Allow deep discharges (up to 100% capacity)

Completely safe, no gas emissions or fire

high resistance to shocks and vibrations

5

Very long operating life (LIFELINE batteries have a 5 year warranty)
